Fill in the boxes above based on the time you will need to have ridden each ride based on the amount of time you will have at the park. Use the formula below to assist you.

$$60 \text{ (minutes)} * X \text{ (hours)} = Y$$

$$Y / 32 \text{ (rides)} = Z$$

If you know you will be at the park until close, place closing time in Ride 32's box. From there, subtract Z from each time going from bottom to top.

** If you're left with a fraction of a minute, you can either do the math to seconds if you're that detailed, or round DOWN the minutes for ease. If you round down, your starting time will be AFTER the park opens. That will mean you'll be working at a slightly faster pace, but it will work out in the end if you're able to keep pace.*
